

IN THE SPECIFICATION:

Please amend the title as follows:

WHEELED ~~WEED EATER~~ STRING TRIMMER

Please amend the abstract as follows:

A harvester of the type known as a ~~weed-eater~~ string trimmer includes a wheel on which the harvester rests. The harvester is supported by the wheel during use.

Please amend the specification as follows:

In the four Paragraphs beginning at Page 1 Line 9:

Many people use some form of harvester to trim the grass and weeds around their homes. These harvesters include the so-called WEED EATER™ or, more generically, string trimmer which includes a filament attached to a motor and rotated at high speed to cut the grass or weeds. ~~Weed-eaters~~ String trimmers are very convenient and easy to use and thus have enjoyed considerable commercial success.

However, many people find that they must maneuver the ~~weed-eater~~ string trimmer into difficult to reach areas. This can be

cumbersome. Such difficulties can be exacerbated if the terrain is difficult and hilly. It may be difficult to use a ~~weed-eater~~ string trimmer on a hill with a steep incline. The harvester may also have to be lifted into various positions to be effective.

Therefore, there is a need for a harvester of the type which includes a rotatable element on a shaft which can be easily maneuvered.

Often, a user operates a ~~weed-eater~~ string trimmer for long periods of time. This can be tiring if the device must be carried and held above the ground.
